Application

Hi-Q COG capacitance are ideally suited for RF and Microwave application requiring high Q, low ESR, and high resonant frequency

Note for CQ

The following Q value is just confirmed by general customer. If there is a higher requirement for Q value requirements, we can design and produce according to the special requirements.

For the customer whose requirements for frequency is between 1MHz and 2,4GHz or higher frequency, we can design it according to theri requierements. The frequency of CQ is a little bit higher than that of CF. Please choose them according to your requirements.

High Voltage MLCC

Middle & High Voltage MLCC is a kind of special design MLCC that bases on the technology of general MLCC. This kind of MLCC has stable high voltage reliability and suitable to SMT. Middle & igh Voltage MLCC is widely applicable for many direct high voltage circuits in which it can improve the performance of the circuit.

Application

Analog & Digital modems
LAN & WAN Inteface
Lighting Ballast Circuits
Voltage Multipliers
DC-DC-Converter
Back-Lighting Inverters

Measurement Method for High Voltage MLCC

Rated Voltage Range	Measuring Method
500V ≤Vr ≤ 1000V	Force 150% Rated Voltage for 5seconds. Max. current should not exceed 50mA
1000V ≤Vr ≤ 2000V	Force 120% Rated Voltage for 5seconds. Max. current should not exceed 50mA
2000V ≤Vr ≤ 5000V	Force 120% Rated Voltage for 5seconds. Max. current should not exceed 10mA

Soldering Informations

Storage Methods

The guaranteed period for solderability is 6 mounth (Under deliver package conditions).
Storage conditions:
Temperature: 5~40°C
Relative Humidity: 20~70%

Precausions for use

The Multilayer Ceramic Capacitor (MLCC) may fail in a short circuit modern in an open circuit mode when subjected to severe conditions of electrical and / or mechanical stress beyond the specified rating and specified conditions in the specification, which will result in burn out, flaming or glowing in the worst case.

Following precautions for safety and Apllication Notes shall be taken in your major considaration. If you have a question about the precautions füor handling, please consult our engineering department of our factory.

Manual Soldering

Manual Soldering can pose a great risk of ceramic thermal cracks in capacitos. The hot soldering iron tip comes into direct contact witrh the end terminations, and operator careless may cause the tip of the soldering iron to come into direct contact with the ceramic body of the capacitor. Therfore the soldering iron must be handled carefully, and oay much attention to the selection of the soldering iron tip and temperature contact of the tip.
